

SMALL POTS

Schmidt has raised the bar again! Small Blast Pots are now better than ever!

The industry's most productive blasting systems are better than ever. Already boasting the industry's lowest pressure drop, Schmidt® blast pots keep improving with both quality of life upgrades and substantial feature improvements.

Schmidt blasting systems represent the greatest value for both contractors and industrial users, especially when working with expensive media where productivity and efficiency are necessary to maximize profit. Our systems are designed to maximize pressure from the air compressor all the way to the blast hose, compared to as much as a 10-15 psi loss in competitors' units.

FEATURES

- MicroValve® 3 (MV3™) with dramatically improved wear resistance
- VBS II™ (Volumetric Blowdown Suppression) system, designed to dramatically reduce noise and protect the job site from fast moving particles
- SureFit™ snap-on handway gasket allows for an even fit, greatly reducing the risk for air leaks
- Improved pop-up and new skirted pop-up gasket improve vessel seal, extending the life of the pot
- Hinged lid for easier and more convenient access to the vessel and weather protection (optional)
- Universal load skid on all pot sizes for ease of transport (optional)

A Closer Look

A detailed look at some of the features on the Small Blast Pots.

MICROVALVE® 3

The Schmidt® MV3™ abrasive metering valve is the newest innovation in the family of industry leading Schmidt abrasive metering valves. The MV3 offers proven productivity and safety advantages that Schmidt valves deliver to abrasive blasting operations: precise metering of abrasive, extended service life, improved cleanout port, and easy access to wear components for safe, efficient maintenance.

VBS II

The Schmidt VBS II™ is the latest technology for suppressing the intensity of the air/energy during vessel depressurization. It is the only system specifically designed to safely reduce the noise levels and abrasive particle velocity (speeds) which occur during vessel blowdown.

SUREFIT HANDWAY GASKET

The Schmidt® SureFit™ handway gasket simplifies the installation of the handway cover. It eliminates loose gaskets that are difficult to keep properly aligned, making installation difficult and causing leaks. The SureFit gasket snaps onto the handway cover to ensure proper alignment and maximize a proper seal.
